SYNIRO

We don't just reduce accidents; we prevent them before they start.

Preventive Driving Intelligence System

A sensor-enabled smart mat detects when a driver's attention drops and triggers intelligent alerts — before an incident ever happens.

How it works

01 Detect

The smart mat continuously senses whether the driver is attentive.

02 Analyze

Vital-sign data is processed by the control unit and AI algorithms to spot declining attention.

03 Redirect

Intelligent alerts bring the driver's focus back to the road before an incident starts.

Who it is for

- Shipping & Logistics
- Heavy Transport
- Passenger & Bus Fleets
- Delivery & Last-Mile

Why it matters

Fatigue was a direct factor in 13% of commercial truck accidents.

Indirect losses reach 4-6x every dollar of direct loss.

Hardware manufactured through recycling plastic waste.
